

## 1. Write a blog on Difference between HTTP1.1 vs HTTP2

<u>HTTP1.1</u>	<u>HTTP2</u>
<ul style="list-style-type: none"><li>• It works on the textual format</li><li>• There is head of line blocking that blocks all the requests behind it until it doesn't get its all resources.</li><li>• It compresses data by itself.</li></ul>	<ul style="list-style-type: none"><li>• It works on the binary protocol</li><li>• It allows multiplexing so one TCP connection is required for multiple requests.</li><li>• It uses HPACK for data compression.</li></ul>

## 2. Write a blog about objects and its internal representation in Javascript

Objects, in JavaScript, are the most important data type and form the building blocks for modern JavaScript. These objects are quite different from JavaScript's primitive data types (Number, String, Boolean, null, undefined, and symbol) in the sense that these primitive data types all store a single value each (depending on their types).

### Syntax:

```
new Object(value)
```

```
Object(value)
```

```
let object_name = {  
    key_name : value,  
    ...  
}
```
